7th grade SS, SC, and ELA Week 2

Scheduled for Apr 27, 8:00 AM

RESPIRATORY SYSTEM

Week Two:

1) Take a picture or write details of the 5 plants/animal you chose from week one.

2) Record your activity. While you are active, take note of your breathing rate (quicker, slower). Please record different activities and note which you were breathing slow and fast. This can be over a couple days while doing, yard work, skate boarding, riding a bike, vacuuming, or any activity you are doing.

Record your breathing while sitting. Perhaps you are reading or watching tv.

If you recall, Cellular respiration is cells using food and oxygen to release oxygen in the mitochondria. Why would your breathing change with activity or at rest? (Connect your reasoning to the detail of activity and resting)
